WE HAVE GONE GREENER

Check out our range of desk tops made from recycled plastics

With over 20 years of expertise in designing and building desk solutions, ddb can now offer the most environmentally friendly desks around.

Plastic has become such a problem for the world as we struggle to find a way to get rid of single use plastic waste. We've all been moved to tears when watching those horrifying documentaries on the harm this waste is causing to our marine and wildlife.

ddb can't stand by and watch this continue so we've created a new range that uses recycled plastics to make desktops that are built to last, look beautiful and are highly practical.

ddb have always chosen to use sustainable materials, so going even greener with recycled plastics worktops is taking our commitment to protecting the environment further.

Improve your green credentials and be proud to make a difference by selecting a **ddb GREEN range desk**.

What's more, we are also recycling the offcuts from the production process!

A **ddb** desk is created with embedded IT and technology features to help promote inspiration, innovation and enthusiasm wherever work may be.
